GRANULAR RECOVERY FOR EXCHANGE

## Best-in-Class Recovery, Search, and Migration of Exchange Servers, Mailboxes, and Email

### Use with StorageCraft ShadowProtect Backups to Quickly Recover Email Messages, Mailboxes, and Other Mailbox Content

Backing up, recovering, or migrating Exchange servers can be particularly challenging for small and medium-sized businesses. That's why it's important to include a way to recover or migrate email messages and mailboxes quickly and easily. Award-winning StorageCraft® ShadowProtect® Granular Recovery for Exchange allows you to recover and migrate individual or multiple mailboxes from an Exchange database (EDB) file fast. The easy-to-use interface enables you to recover or migrate from a StorageCraft ShadowProtect Exchange backup to a production Exchange server or PST file.

Mount a ShadowProtect backup image of your Exchange database to view all of your users' mailboxes with this helpful tool. Navigate to a specific mailbox and drag-and-drop the entire mailbox or as many email messages, attachments, or mailbox items as you need to recover or migrate.

ShadowProtect Granular Recovery for Exchange is also a powerful search tool that allows you to search mailboxes and email messages based on criteria you specify—directly from an EDB file. Search your Exchange database for specific keywords, or use the Advanced Search option to search based on message dates, senders, recipients, or subject matter. You can also use ShadowProtect Granular Recovery for Exchange to quickly search across Exchange server database files including Database Availability Groups (DAG) and Client Access Server (CAS) roles.

You can also simplify migration of mailboxes and entire Exchange servers with ShadowProtect Granular Recovery for Exchange. Easily drag and drop individual mailboxes or your entire Exchange server database. ShadowProtect Granular Recovery for Exchange will automatically create mailboxes for users not on your target Exchange system. Plus, the new data throttling feature helps you better manage recovery and migration to avoid network traffic bottlenecks.

By adding ShadowProtect Granular Recovery for Exchange to the tools you're already using in the StorageCraft Recover-Ability™ solution, you have complete backup, recovery, search, and migration of Exchange servers and critical email data.

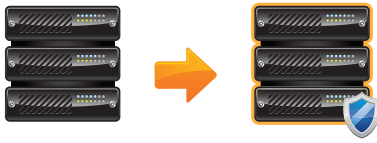

### ShadowProtect Granular Recovery for Exchange Includes the Following Benefits:

- Recover one or more mailboxes with ease.
- Restore individual email messages, attachments, and other mailbox content items quickly and easily.
- Migrate individual mailboxes or full Exchange servers with the help of easy drag-and-drop functionality.
- Throttle data transfers to better manage network traffic during migration and recovery projects.
- Search mailboxes, email messages, or entire Exchange databases for specific keywords.
- Use with ShadowProtect Server, ShadowProtect Small Business Server, and ShadowProtect Virtual for complete Exchange backup, system recovery, and mailbox retrieval.
- Select alternative temporary database locations when limited on hard drive space.

## How It Works:

1. Select a backup of your Exchange server created with ShadowProtect backup software.

2. Mount the ShadowProtect backup as a writable image or extract the EDB file and transaction logs and place in a local directory.

3. Launch ShadowProtect Granular Recovery for Exchange and access the Exchange EDB file.

4. Recover and migrate mailboxes, email messages, and attachments or search for messages based on criteria you specify. When needed, use ShadowProtect Granular Recovery for Exchange to migrate mailboxes or an entire Exchange database to a live Exchange server.

## ShadowProtect Granular Recovery for Exchange Supports:

- Microsoft Exchange Server 2013
- Microsoft Exchange Server 2010
- Microsoft Exchange Server 2007
- Microsoft Exchange Server 2003

Please review product documentation for a complete list of application and client system support.

## Save Time

Shorten the time required to migrate, recover, or search your Exchange database. Restore specific mailboxes, email messages, or email attachments quickly with ShadowProtect Granular Recovery for Exchange. Migrate or restore Exchange servers, mailboxes, or files by dragging and dropping them from your EDB file backup to your production server or to a PST file.

## Save Money

Exchange recovery and migration can be costly and frustrating. ShadowProtect Granular Recovery for Exchange allows you to search, recover, or migrate your Exchange database quickly and easily, without the need for additional resources or complicated recovery solutions.
