

Milestone Systems

XProtect® Corporate

The Open Platform Company

High performance

High performance for high security

XProtect Corporate is powerful IP video management software (VMS) designed for large-scale, high-security deployments. Its central management interface enables the efficient administration of an entire surveillance installation including all connected cameras and security devices, regardless of its size or if it is distributed across multiple geographic locations. For systems demanding supreme situational awareness and precise response to incidents, XProtect Corporate has interactive maps linked to alarms and built-in support for XProtect® Smart Wall.

XProtect Corporate provides the ultimate system reliability for high-security installations; Edge Storage support combined with Failover Recording Servers and redundant management servers ensure video recordings are never interrupted.

Reduce the risk of missing video evidence

Uninterrupted video viewing and recording

XProtect Corporate is the ideal solution for installations requiring constant access to video, such as large retail chains, airports, and cities. In case of a loss of power or server failure, hot standby Failover Recording Servers ensure minimal interruption and video loss.

Additional redundancy option

Edge Storage with flexible retrieval* is an additional redundancy option that ensures the uninterrupted recording of video during a system failure. Additionally, video can always be automatically retrieved based on set time schedules or triggered by events.

XProtect Corporate offers two unique solutions to centrally manage surveillance of multiple sites

Milestone Interconnect™

Milestone Interconnect is a unique system concept that enables XProtect Corporate to be interconnected with any XProtect VMS, Milestone Husky NVRs or Milestone Arcus embedded appliances to create one centralized surveillance operation across multiple geographically dispersed sites.

For example, large retail chains can choose the Milestone product that matches their needs and budget at each local site. Using Milestone Interconnect and XProtect Corporate at the central headquarters, operators can view live and recorded video and retrieve video from each individual store.

The proactive detection of system errors in remote systems and the possibility to remotely manage interconnected systems reduce system administration costs and costly on-site visits.

Milestone Federated Architecture™

Milestone Federated Architecture enables multiple XProtect Corporate and XProtect® Expert sites to be operated as one large system with a central XProtect Corporate system. This provides operators with access to all cameras in the system, while all federated sites can be administrated centrally. With a flexible user-rights structure, users and administra-

tors can be granted access to any combination of sites, from a single system to all systems in the federated hierarchy. For example, in an airport installation, different entities such as airlines, homeland security and public authorities can all receive access to the surveillance system.

**Cameras must be equipped with Edge Storage functionality, please refer to Milestone's website for a list of all supported devices.*

Supreme situational awareness

Gain a comprehensive overview of the entire surveillance site

Interactive video wall for quick response

Designed for large surveillance installations, XProtect® Smart Wall is an advanced video wall for control rooms and alarm centers. It enables operators to obtain an optimal situational overview and coordinate response activities.

Proactive alarm response

A prioritized alarm list provides an overview of active alarms and their severity empowering operators to address the most important incidents. If an alarm is triggered, the location map displays the corresponding alarm and camera locations, allowing operators to take action quickly.

Flag live video for later investigation

Users can quickly sort through large amounts of evidence by bookmarking video sections and adding descriptive notes. Bookmarks are particularly useful for installations with around-the-clock monitoring since operators can easily share information.

Product facts

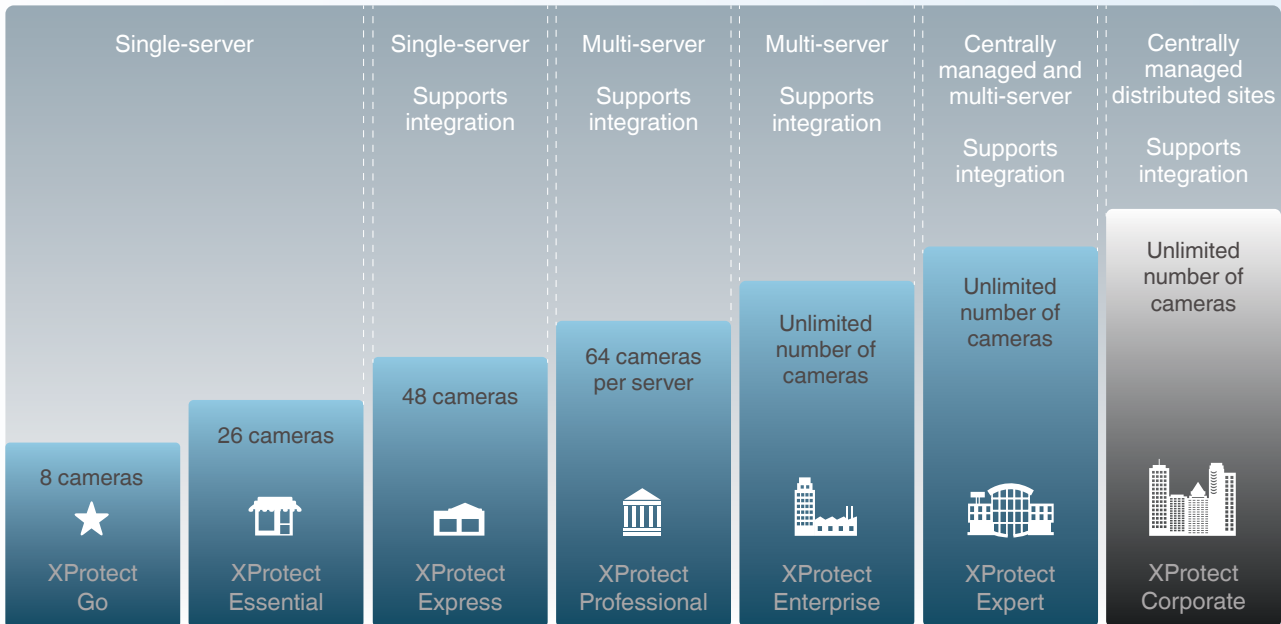

- Supports an unlimited number of cameras, users and sites
- Central-management interface controls all connected cameras, devices and storage units regardless of its size or if it is distributed across multiple geographical locations
- Can be accessed by three viewing clients for daily operations; web-based surveillance and access through smartphones and tablets
- Compatible with third-party integrations, such as analytics, building automation systems and access control
- Multi-stage video storage with data grooming possibilities to provide efficient long-term storage
- Video database encryption and digital signing on exported video evidence help verify exported video has not been modified or tampered with
- Strict user rights, such as restricting permission to specific time periods to protect the integrity of live and recorded video

The Milestone Open Platform

A foundation for long-term success

Milestone's XProtect open platform video management software (VMS) integrates with the industry's widest choice in cameras, giving you the freedom to choose equipment according to your needs and budget. Committed to providing a true IP video open platform and freedom of choice, Milestone is proud to be among the first VMS vendors to support and lead the future progress of ONVIF and PSIA standards.

Integrate applications and systems into XProtect VMS with the Milestone Integration Platform Software Development Kit (MIP SDK). The open architecture of XProtect, together with the MIP SDK, allows for endless possibilities to add features and functionality for creating powerful, custom surveillance solutions.

About Milestone Systems

Founded in 1998, Milestone Systems is the global industry leader in open platform IP video management software. The XProtect platform delivers powerful surveillance that is easy to manage, reliable and proven in thousands of customer installations around the world. With support for the widest choice in network hardware and integration with other systems, XProtect provides best-in-class solutions to video enable organizations – managing risks, protecting people and assets, optimizing processes and reducing costs. Milestone software is sold through authorized and certified partners. For more information, visit: www.milestonesys.com
